

Optional shade cloth available to cover wire gap

Technical Data

The Dune Retainer fence allows for easy access to beach areas by foot traffic whilst providing maximum protection to neighboring dune areas. The lower half of the fence provides a retaining structure for non-cohesive soils and sands whilst the upper half can also act as a windbreak to protect new vegetation.

The Dune Retainer fence is complemented by a suitable erosion control scheme for foot traffic such as a boardwalk or similar.

Specifications

Post and rail sections are H4 CCA treated Slash Pine. Sleeper sections are H4 CCA treated Radiata Pine. ACQ treatment is available for special orders where environmental sensitivity is an issue.

All dowels are supplied either as galvanised or 316 stainless steel depending upon proximity to coastal environment and service life requirements.

Posts are supplied with 900mm in ground embedment depth for loose soil footings.

Timber can be supplied in a range of finishes including raw, Dimension 4 Natural stain and various paint finishes.
